## **THE NATIONAL ENERGY TECHNOLOGY LABORATORY**

The National Energy Technology Laboratory (NETL) is a science, technology, and energy laboratory owned and operated by the U.S. Department of Energy (DOE). As part of DOE's national laboratory system, NETL supports DOE's mission to advance the national, economic, and energy security of the United States.

NETL has expertise in fossil energy technologies, contract and project management, analysis of energy systems, and international energy issues. Through onsite and contracted research, NETL advances technologies to resolve the environmental, supply, and reliability constraints of producing and using fossil resources.

NETL has sites in Fairbanks, Alaska; Morgantown, West Virginia; Pittsburgh, Pennsylvania; and Tulsa, Oklahoma. More than 1,100 employees work at NETL's four sites; roughly half are Federal employees and half are site-support contractors. Major site-support contractors include Concurrent Technologies Corporation, D.N. American, EG&G Technical Services, Parsons, and Science Applications International Corporation.

*NETL's mission is to implement a science  
and technology development program to  
resolve the environmental, supply, and  
reliability constraints of producing and  
using fossil resources.*

## What We Do

In addition to conducting cutting-edge research and technology development on site, NETL shapes, funds, and manages contracted research in all 50 states and more than 40 foreign countries. Our research portfolio includes nearly 1,100 projects, with a total award value of \$8 billion and private sector cost-sharing of almost \$4 billion. These projects are carried out through various contracting arrangements with corporations, small businesses, universities, non-profit organizations, and other national laboratories and government agencies.

## Our Contribution to Education

NETL is a proactive supporter of educational initiatives at all levels. We fund more than 200 energy research and development projects at U.S. universities to advance energy science and technology, and to provide a trained workforce for the energy industry of the future. NETL's outreach efforts also include regional career programs, high school science bowls, in-school demonstrations, computer donations to area schools, work-study programs for high school and college students, and other initiatives that encourage careers in engineering and science.
